Team ID	SWTID-2026-8578
Project Name	Import Data using Transform Maps
Maximum Marks	5 Marks

Project Proposal

Import Data using Transform Maps is a ServiceNow micro project that demonstrates how structured employee data from an external spreadsheet can be loaded into an Import Set table, transformed into a custom Employee Test table, validated, and presented through reports and a dashboard. The documented workflow also uses Coalesce to update existing records instead of creating duplicates.

Project Overview

Field	Project-specific details
Objective	Implement a repeatable employee data import process using ServiceNow Import Sets and Transform Maps.
Scope	Spreadsheet preparation, custom target table, Import Set table, Transform Map, field mapping, transformation, Coalesce, validation, reports and dashboard.
Problem Statement	Bulk employee data needs to be migrated accurately and repeated imports should not create duplicate employee records.
Impact	Provides a structured import workflow and visibility into inserted, updated and ignored records.
Proposed Approach	Load spreadsheet data into Employee Import, map to Employee Test, enable Coalesce on Employee ID, transform, validate, then report/dashboard.

Main configuration objects

Target table: Employee Test (u_employee_test). Import table: Employee Import (u_employee_import). Target fields: Employee ID, Employee Name, Email, Department, Location.
